

Gates for Distance Work

This document prepared by Tom Francis Never2Old2Weave@Yahoo.com

The design of these gates is attributed to Amanda Nelson – “Control at a distance” DVD.

No glue necessary... the normal press fit of PVC fittings is fine.

All 3/4" PC. For each gate you will need:

- (3) 90 degree
- (2) Tees
- (2) End caps

(14) 8" plastic cable ties

(1) 10ft PVC pipe cut as follows:

- (2) 20"
- (2) (29-1/2")
- (1) 1-3/8"
- (2) 9"

The total of which is just less than 10'.

Plastic screen/fencing of some type for the webbing.

Note: the one end is elevated to allow for stacking the gates for carrying or storage as shown on right, or to allow the legs to rotate 90 degrees to stack them flat (not shown).
